Focusing on the relation of theology to postcolonial theory, Postcolonial Theologies brings together a wide diversity of authors, many of them fresh and exciting theological voices, in essays that are stunningly creative and prophetically lucid. All essays are theologically constructive, not merely deconstructive or critical, in their visions for Christianity. Forming a sort of doctrinal landscape, they emerge under the themes of theological anthropology shaped by ethnicity, class, and privilege; a Christology that intersects the claims of Christ and empire; and a Cosmology that imagines a postcolonial world. Explores and challenges dominant interpretations of transitions as they relate to ageing and the life course. This book takes a perspective that draws together ideas about late life as expressed in social policy and socio-cultural constructs of age with lived experience.Originally published: New York: A. de Gruyter, c1987.Intended for courses on theories of human development, this new text presents nine theories grouped into three major families - those that emphasize biological systems; those that emphasize environmental factors; and those that emphasize a dynamic interaction between biological and environmental forces. The nine theories selected have a long and productive history in human development and continue to evolve as a result of new insights. The inclusion of social role theory and life course theory expand the book's relevance to the study of adulthood and aging. Grouping the theories by families enhances students' ability to think critically about theoretical ideas, assess the strengths and weaknesses of each theory, and gain a deeper understanding of how each theory guides research and application. The three families are introduced with a brief overview of the unique perspectives of each theory and the rationale for grouping these theories together. Discussion of each theory includes: the historical and cultural context in which the theory was developed; an overview of key concepts and important ideas; new directions in contemporary scientific work; a research example illustrating how the theory has been tested and modified; an application showing how the theory has guided the design of an intervention or program; an analysis of how the theory answers basic questions about human development; and a critique highlighting the theories' strengths and weaknesses. Theories of Human Development serves as a text in advanced undergraduate and/or beginning graduate courses in theories of human development. Its clear organization and engaging writing style make it accessible to students with a minimal background in human development. This is a passionate book about a gifted woman. It is written from a psychological viewpoint using the developmental point of view of a number of contemporary developmental psychologists, both men and women. It is a critique of contemporary American shallowness and is an apology for a feminist ethic and a feminist sense of prayer in a world dominated by competition, abstraction, and unthinking labor. Human Behavior Theory and Social Work Practice remains a foundation work for those interested in the practice and teaching of social work. Roberta Greene covers theoretical areas and individual theorists including classical psychoanalytic thought, Eriksonian theory, Carl
Rogers, cognitive theory, systems theory, ecological perspectives, social construction, feminism, and genetics. She discusses the historical context, its philosophical roots, and major assumptions of each theory. The general theme, which distinguishes this volume, is that the person-in-environment perspective has been a central influence in the formation of the profession's knowledge base, as well as its approach to practice. Greene provides perspective on how individuals and social systems interact. This book examines how social workers can use theory to shape social work practice by increasing his or her understanding of and potential for enhancing human well-being. Greene covers the relationship between human behavior theory and professional social work practice. She also explores the challenges and limitations of each theory and addresses the following issues: how the theory serves as a framework for social work practice; how the theory lends itself to an understanding of individual, family, group, community, or organizational behavior; what the implications are of the theory for social work interventions or practice strategies; and what role it proposes for the social worker as a change agent. Throughout the profession's history, social workers have turned to a number of theoretical approaches for the organizing concepts needed to define their practice base. The aims of social work—to improve societal conditions and to enhance social functioning of and between individuals, families, and groups—are put into action across all fields of practice and realized through a variety of methods in a range of settings. This third edition, completely revised, represents a fundamental contribution to the field, and like its predecessors, will be widely used as a basic text. In this bestselling textbook, contributors describe theories of normal human development advanced by such pioneers as Sigmund Freud, Anna Freud, Jean Piaget, Nancy Chodorow, Daniel Levinson, Erik Erikson, and Margaret Mahler. Beginning with infancy, toddlerhood, and preschool, each chapter examines corresponding ideologies concerning maturation and development in middle childhood, adolescence, adulthood, and old age, while acknowledging that no one theory can encompass all aspects of human development. In-depth analyses of the psychology and sociology of development provide educators and practitioners with insights into the specific social contexts of human behavior and help identify variables and deviations. This second edition features up-to-date empirical information, including additional studies on diverse populations, and a new chapter on attachment theory, a growing area of interest for today's clinicians. Positive psychology is currently equated with theory and research on the positive aspects of life. The reality could not be further from the truth. Positive psychology investigates and researches some of the most difficult and painful experiences. Second Wave Positive Psychology: Embracing the Dark Side of Life is an innovative and groundbreaking textbook that explores a variety of topics we consider to be part of the ‘dark’ side of life while emphasising their role in our positive functioning and transformation as human beings. This more nuanced approach to the notions of ‘positive’ and ‘negative’ can be described as the ‘second wave’ of Positive Psychology. Positive Psychology is one of the fastest growing and least understood branches of psychology. Exploring topics at the heart of Positive Psychology, such as meaning, resilience, human development, mortality, change, suffering, and spirituality, this book engages with so-called ‘negative’ matters from a Positive Psychology angle, showing how the path of personal development can involve experiences which, while challenging, can lead to growth, insight, healing and transformation. Containing useful resources, case studies, practical exercises and chapter summaries, Second Wave Positive Psychology is an essential guide for undergraduate and postgraduate students studying positive psychology, as well as clinicians wanting to know more about the subject. It will also be relevant to the layperson who is interested in positive psychology. This volume presents in compact form a review of Erikson's complete psychosocial theory. The now-famous Erikson ideas- the identity crisis, the interdependence of history and life history, and the life cycle (especially the concept that maturity is not the end of psychological growth) are placed in their historical and autobiographical context, providing a summary of Erikson's major themes. In this book, Silin maps the common ground between early childhood and the period sociologists call “young-old age.” Emphasizing the continuities that bind children and adults rather than the differences that traditional developmental psychology claims separate us, he focuses on the themes we all manage across a lifetime. Building on memoir and narrative, Silin argues that when we recognize how the concerns of childhood continue to thread their way through our experience, we look anew at the shape of our lives. This book highlights the powerful generative acts through which people of all ages find new meanings and relationships to compensate for the individual and social losses that mark our lives. In groundbreaking fashion Donald Capps builds on the previous work of Erik Erikson and James Fowler on the eight stages of life and faith development by focusing on the decades of life. This important modification allows developmental theory to be applied to the way people actually discuss life stages, which is in ten-year periods of peoples lives. Capps integrates the insights of psychology with those of pastoral care to show pastors and students how the decades of life impact churches and create situations and contexts for ministry.
use of imagination can lead to greater outcomes in problem solving, innovation, and critical thinking. By providing access to creative outlets, productivity increases in schools, businesses, and other professional settings. Exploring the Benefits of Creativity in Education, Media, and the Arts is a pivotal reference source for the latest scholarly research on the stimulation and implementation of creative thinking in academic and professional environments. Highlighting the foundations of creativity from theoretical and neuroscientific perspectives, this book is ideally designed for academics, professionals, educators, and practitioners. This wide-ranging study looks at how the ageing process has alternately been figured in and excluded from twentieth-century French literature, philosophy and psychoanalysis. It espouses a critical interdisciplinarity and calls into question the assumptions underlying much research into ageing in the social sciences, work in which the negative aspects of growing older are almost invariably suppressed. It offers a major reappraisal of Simone de Beauvoir's great but neglected late treatise, La Vieillesse, and presents the first substantial discussion of a lost documentary film about old age in which Beauvoir appears and which she helped to write, PROMENADE AU PAYS DE LA VIEILLESSE. Questioning Beauvoir's own rather reductive reading of Gide's work on old age, this study analyses the way in which his journal and Ainsi soit-il experiment with a range of representational models for the senescent subject. The encounter between psychoanalysis and ageing is framed by a reading of Violette Leduc's autobiographical trilogy, in which she suggests that psychoanalysis, to its detriment, simply cannot allow ageing to signify. This claim is tested in a critical survey of recent theoretical and clinical work by psychoanalysts interested in ageing in France, the UK and the US. Lastly, Hervé Guibert's recently republished photo-novel about his elderly great-aunts, Suzanne et Louise, is examined as a work of intergenerational empathy and is found, in addition, to be an important statement of his photographic aesthetic. Navigating between the extremes of fury ('age rage') and serene acceptance ('going gently'), this study aims throughout to examine the role which ageing plays in formal, as well as thematic, terms in writing the life of the subject. The later-adult years are commonly viewed as a period in which one struggles to maintain a vestige of the physical, mental, and emotional vitality of one's earlier years. In Still Growing, however, Donald Capps contends that older adulthood is actually a period of growth and development, and that a central feature of this growth and development is the remarkable creativity of older adults. This creativity is the consequence of the wisdom gained through years of experience but is also due to a newly developed capacity to adapt to unprecedented challenges integral to the aging process. Part 1 illustrates the challenges of transitioning to older adulthood from the author's own experiences. Part 2 draws on material from Erik H. Erikson, Sigmund Freud, and Paul W. Pruyser to account for longevity, adaptability, and creativity in older adults. Finally, part 3 focuses on the work of both William James and Walt Disney to fashion a model of creative aging. Examines the importance of beliefs in understanding psychologically relevant issues from self-identity to recovery from grief. This serial publication continues to review life-span research and theory in the behavioral and social sciences, particularly work done by psychologists and sociologists conducting programmatic research on current problems and refining theoretical positions. Each volume introduces excellent peer-reviewed empirical research into the field of life-span development while presenting interdisciplinary viewpoints on the topic. Often challenging accepted theories, this series is of great interest to developmental, personality, and social psychologists. This book novel is the first volume of the series. Developmental Psychopathology, Volume 3, Risk, Disorder, and Adaptation provides a life span developmental perspective on "high-risk" conditions and mental disorders. Moreover, it examines developmental pathways to resilient adaptation in the face of adversity. Theories of Early Childhood Education provides a comprehensive introduction to the various theoretical perspectives influential in early childhood education, from developmental psychology to critical studies, Piaget to Freire. Expert chapter authors examine assumptions underpinning the use of theory in the early years and concisely explore the implications of these questions for policy and practice. Every chapter includes applications to practice that will assist students and professionals in seeing the relevance of the theoretical perspective for their teaching. In recent years, profound changes have affected the way people view the role of religion and spirituality in the life cycle. For many people, spirituality, always considered an essential part of religion, has become an interest no longer tied to organized religion. This book addresses the evolving relationship of spirituality to religion in our time, and the consequences of this change for understanding personality development. It also applies the concept of implicit religion to show how the least easily observed aspects of religion are at work in the growth of personality. More people die by suicide each year than by homicide, wars, and terrorist attacks combined. Witnesses and survivors are left perplexed and troubled. Doctors, clinical psychologists, and social workers try to deal with it through their professional routines; sociologists and psychiatrists attempt to provide theoretical explanations of it. In a study of nearly 7,000 suicides from 1900 to 1950 in New Zealand and Queensland, Australia, John Weaver documents the challenges that ordinary people experienced during turbulent times and, using witnesses' testimony, death bed statements, and suicide notes, reconstructs individuals' thoughts as they decide whether to endure their suffering. Bridging social and medical history, Weaver presents an intellectual and political history of suicide studies, a revealing construction and deconstruction of suicide rates, a discussion of gender, life stages, and socio-economic circumstances in relation to suicide patterns, reflections on reasoning processes and intent, and society's reactions to suicide, including medical intervention. A Sadly Troubled History marshals thousands of suicide inquests, replete with observations on the anxieties of unemployment, the heartbreak of romantic disappointment, the pain of domestic turmoil, and the torments of mental illness, to demonstrate that history - although, like biochemistry, sociology, psychology, and psychiatry, reliant on remarkable yet imperfect information - can contribute to a better understanding of the suicidal act and its motives.
